When I Want to Close the Video...

- I need to click the video first to pause and make the exit button apparent.

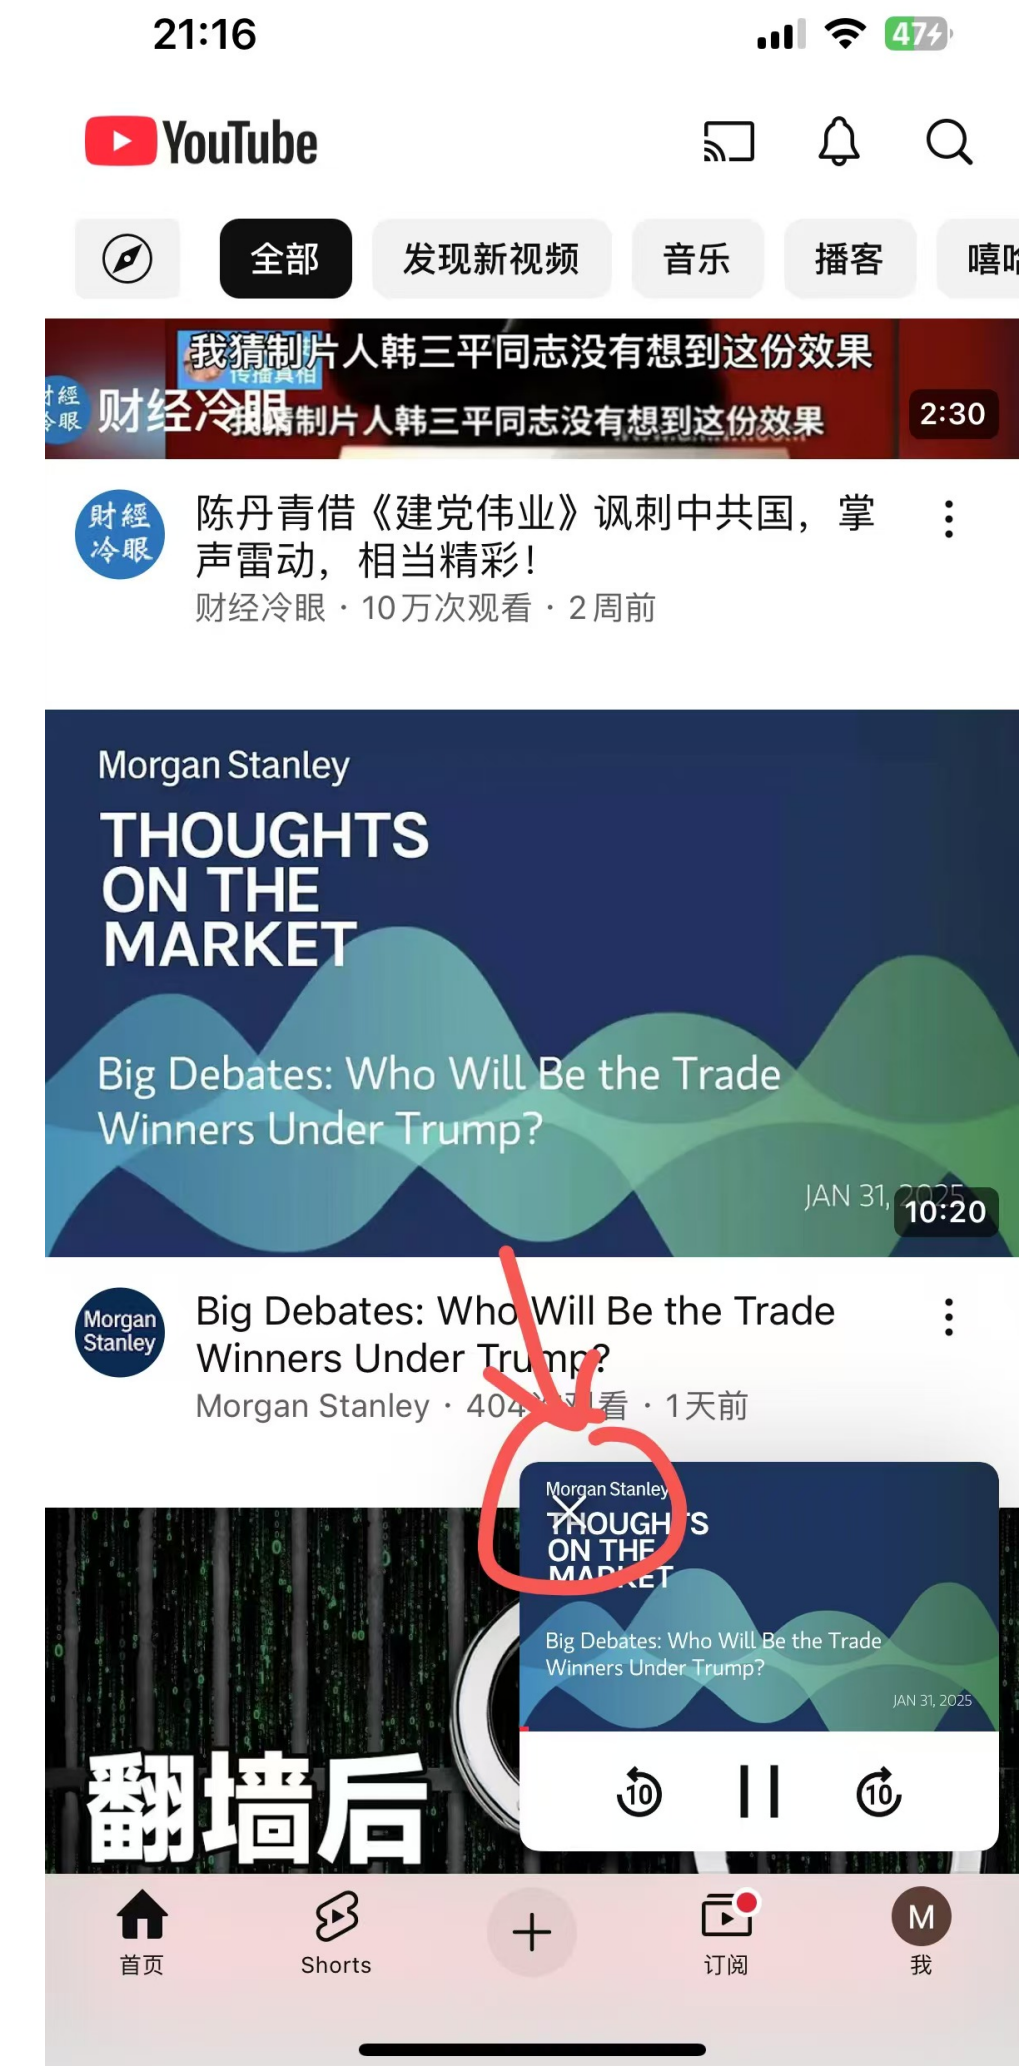

Then I Need to Click this Button

- Then I click this button...

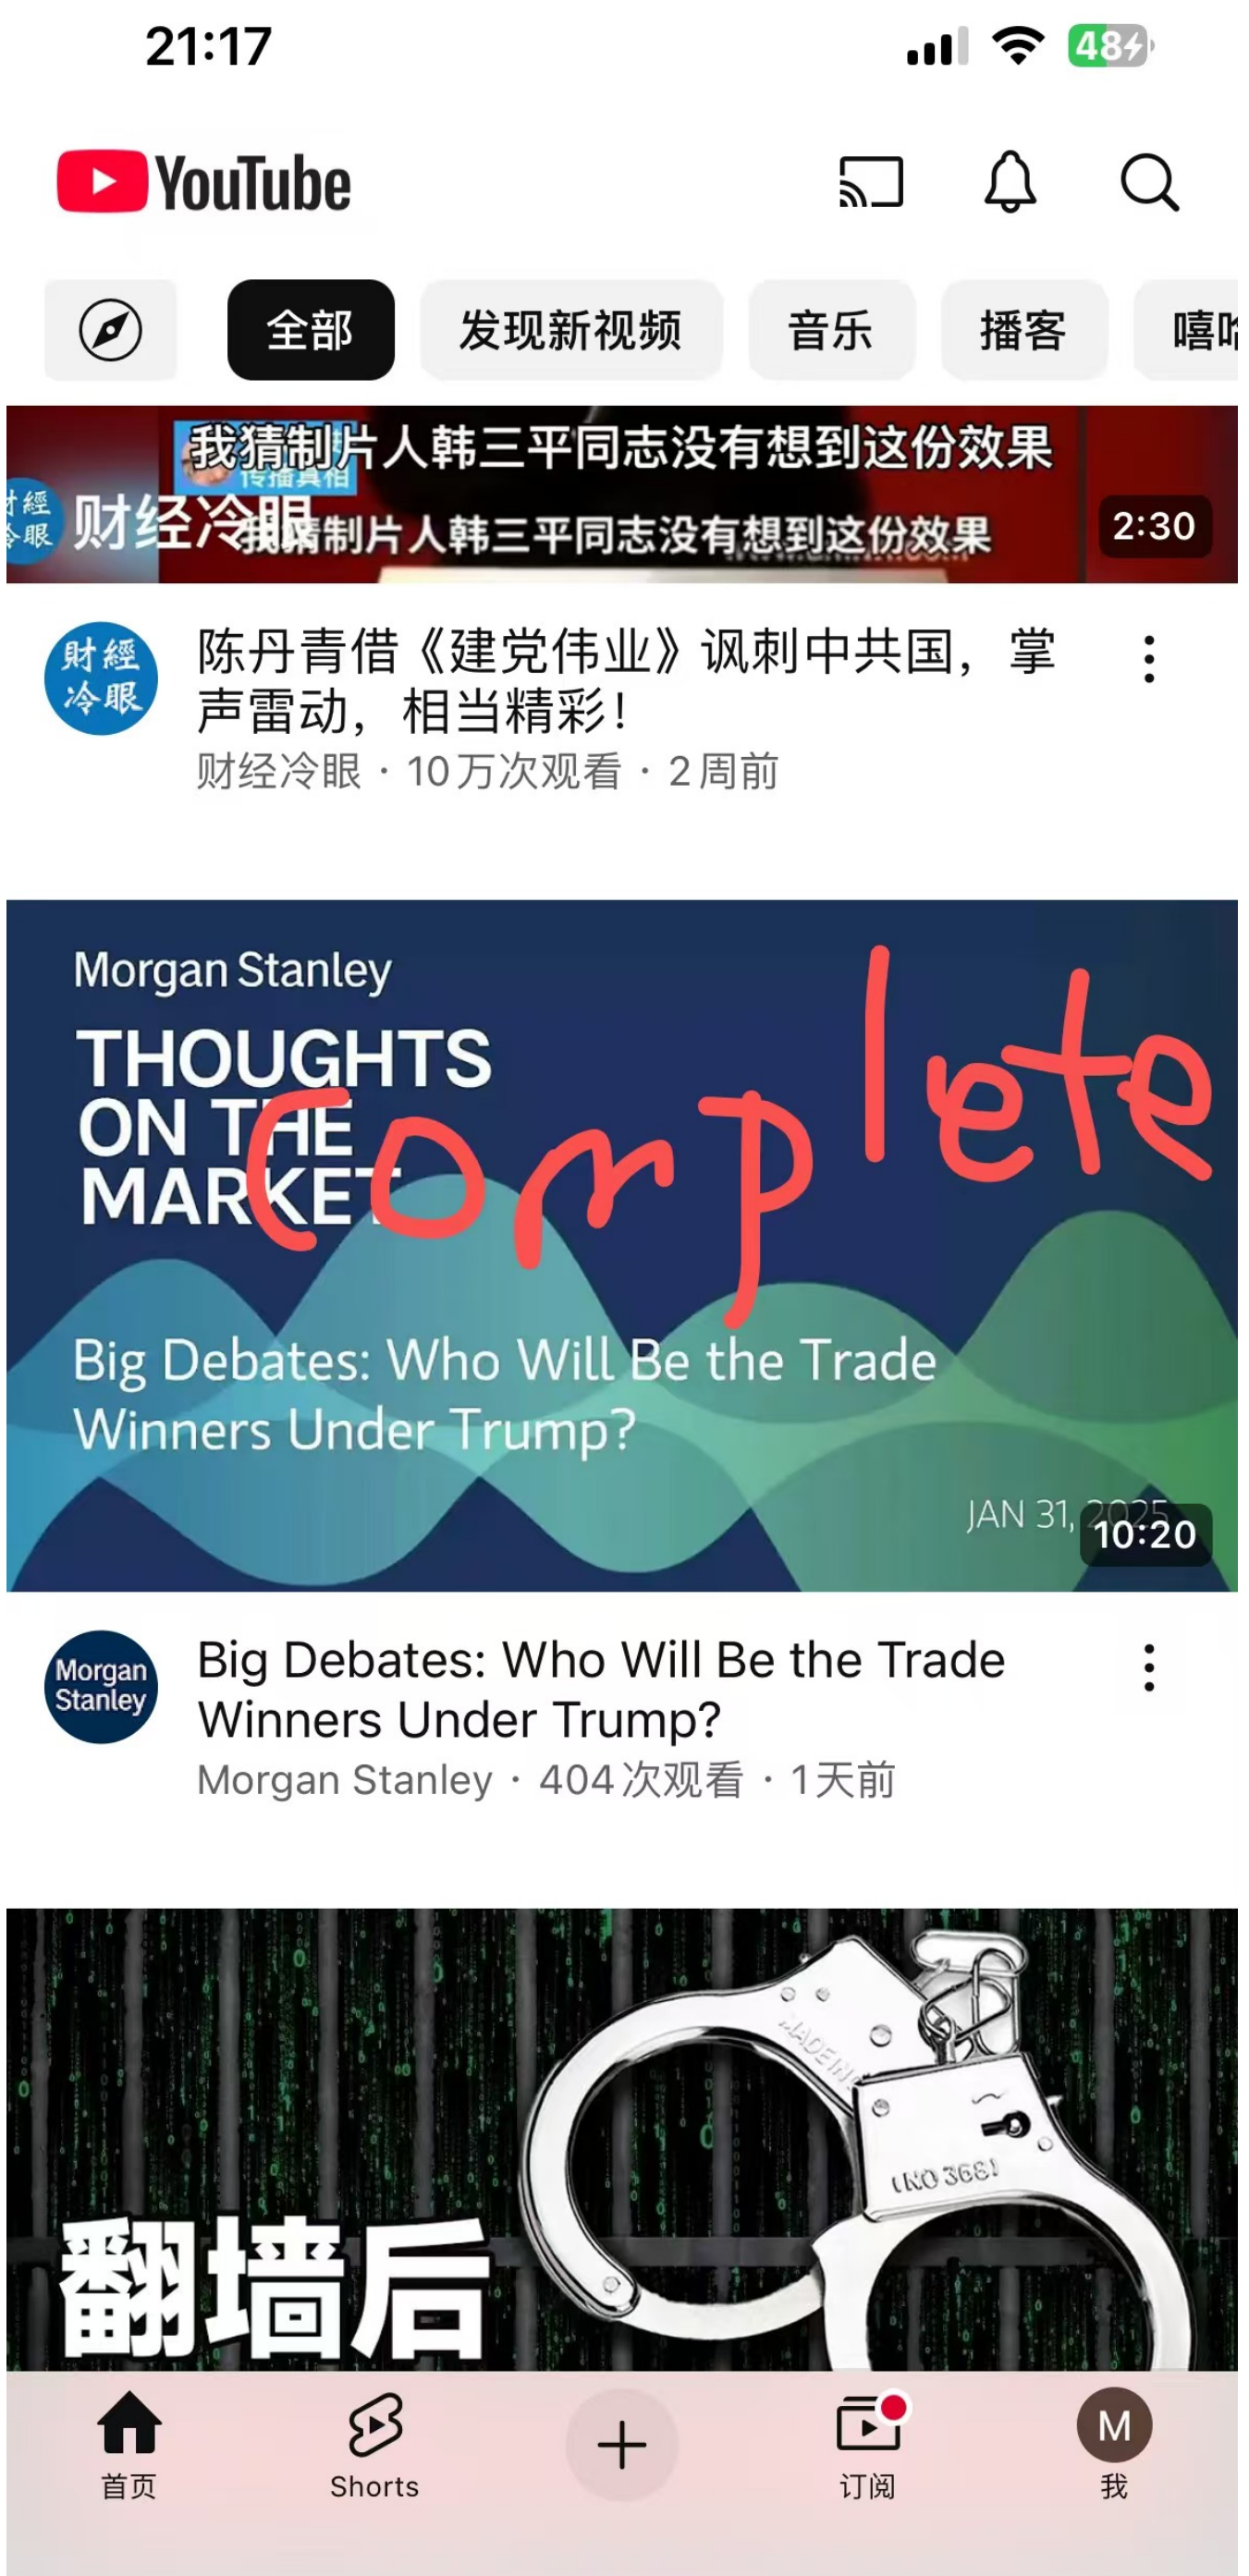

However, the Video is not Closed Completely!

- After I clicked the button in the last step, the video turned into a small windows, instead of being closed.
- I still need to click the button to fully close this video.

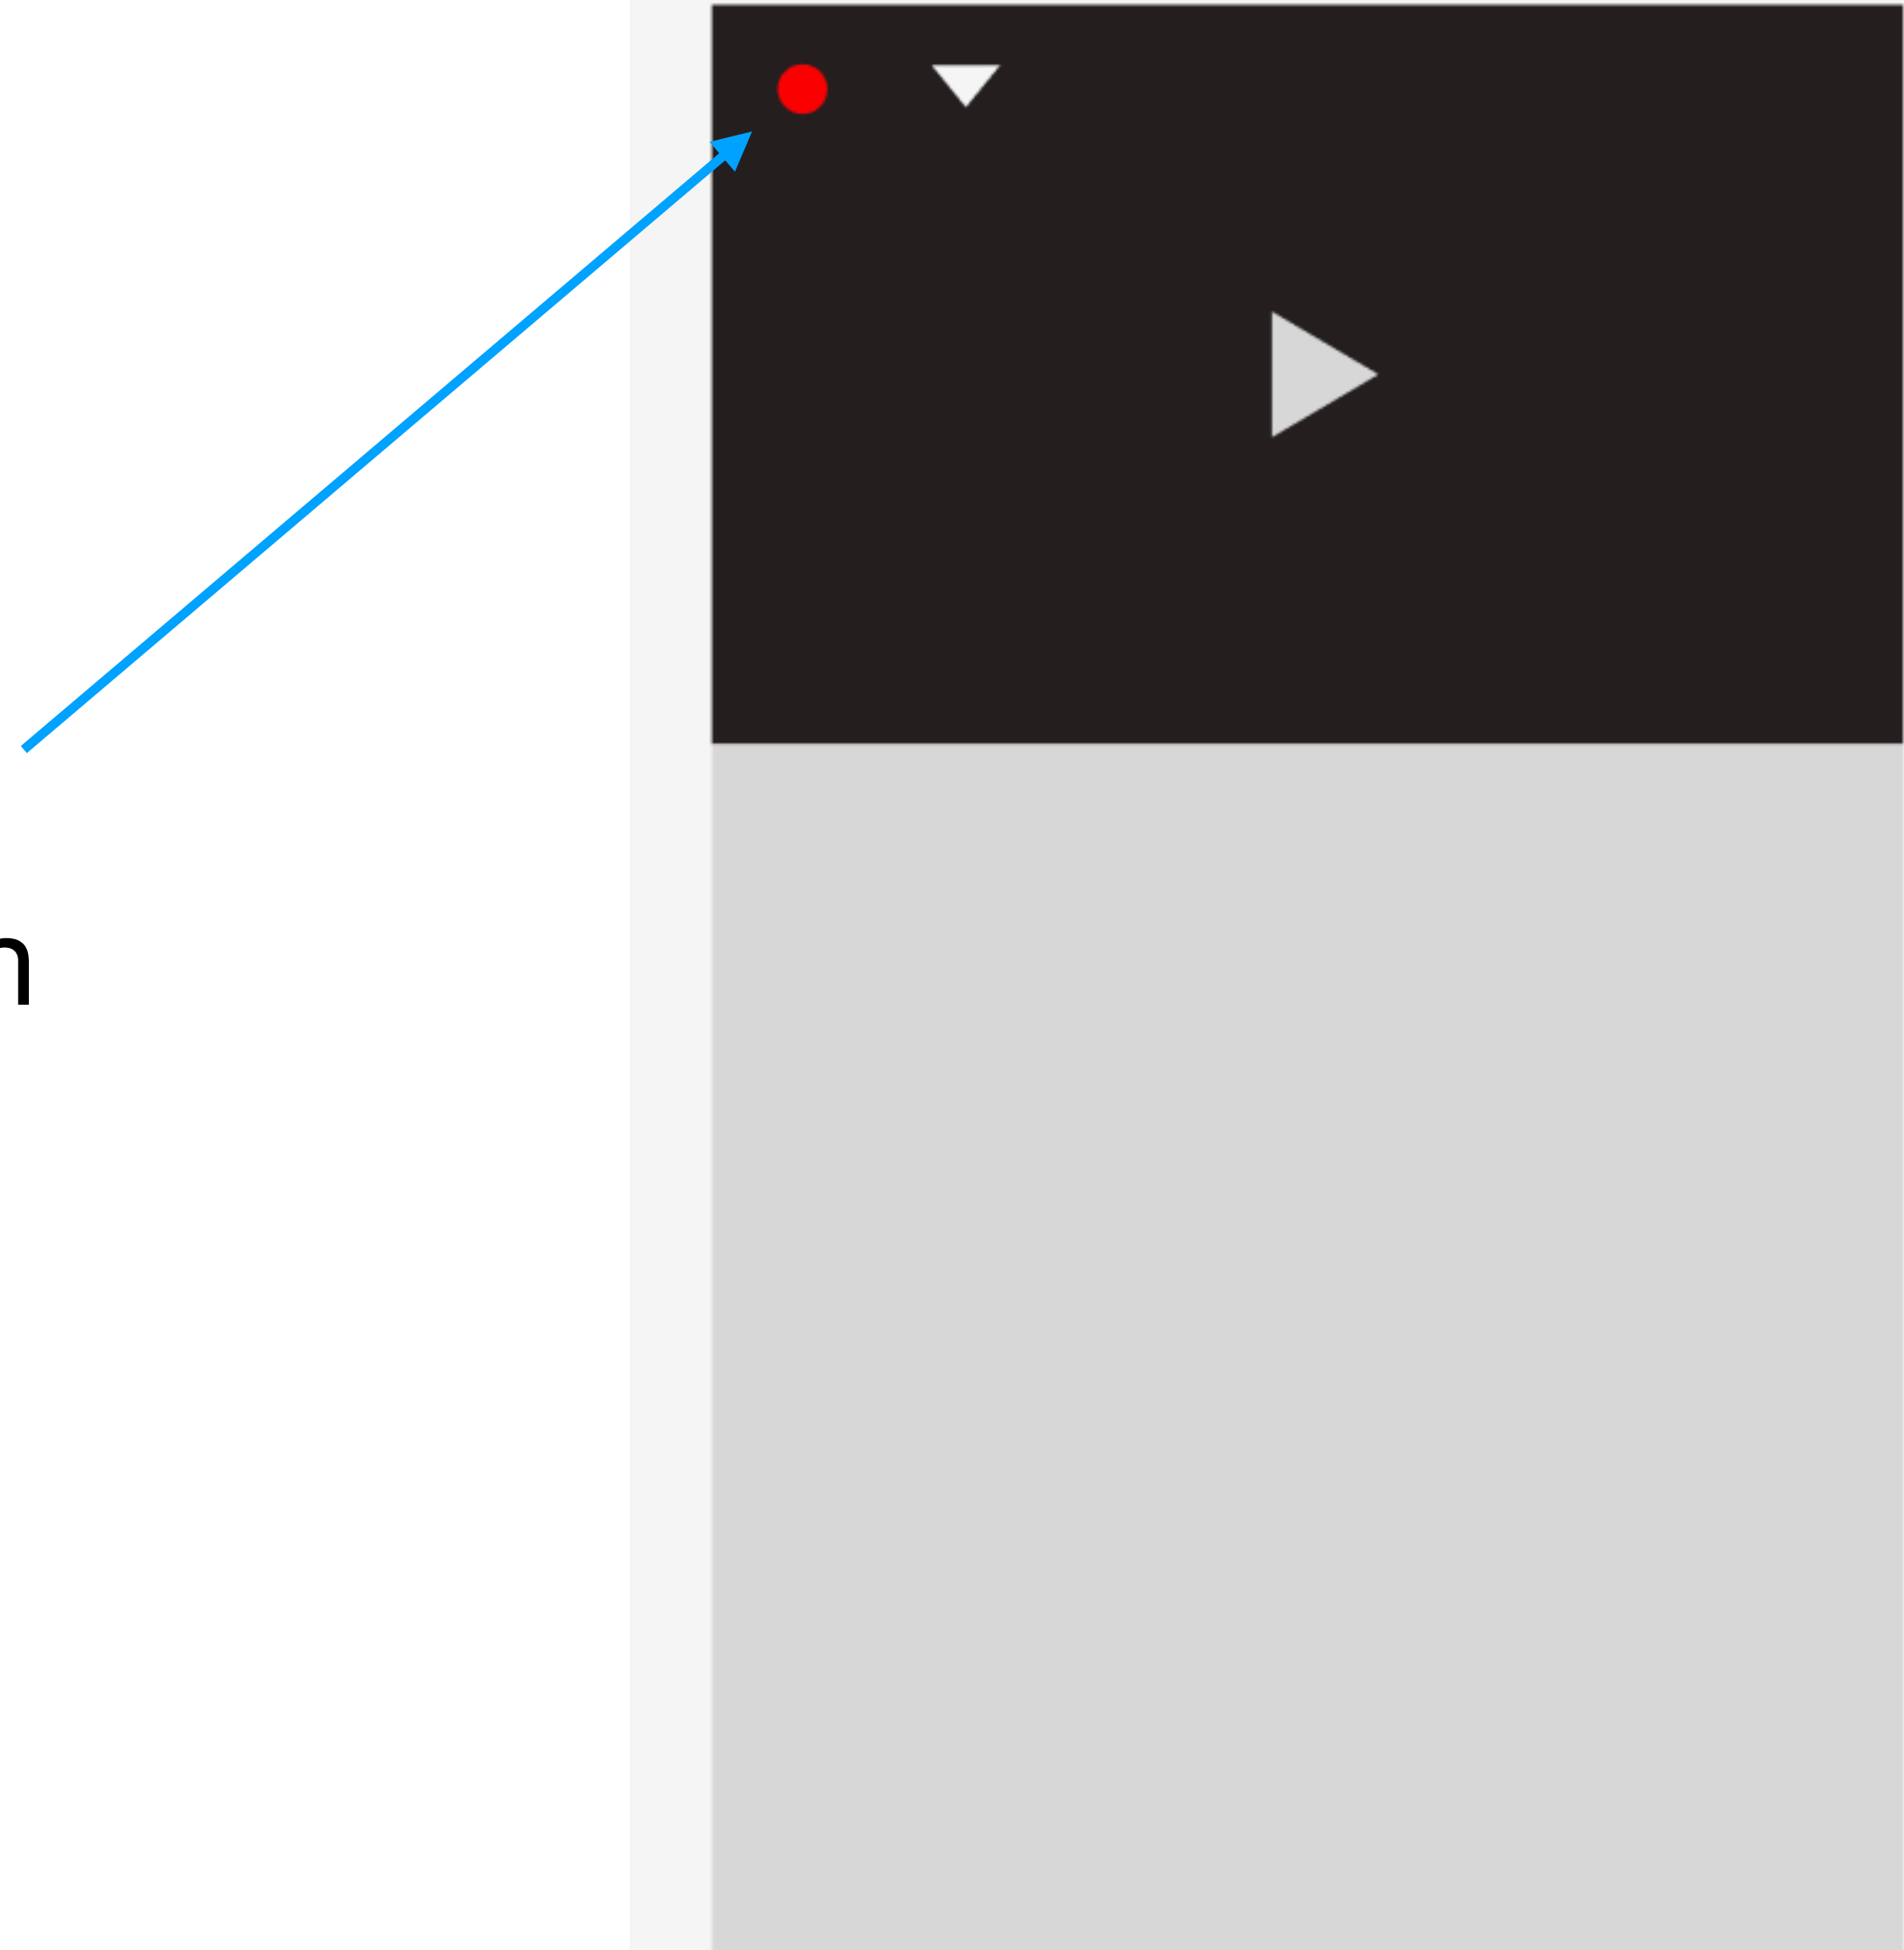

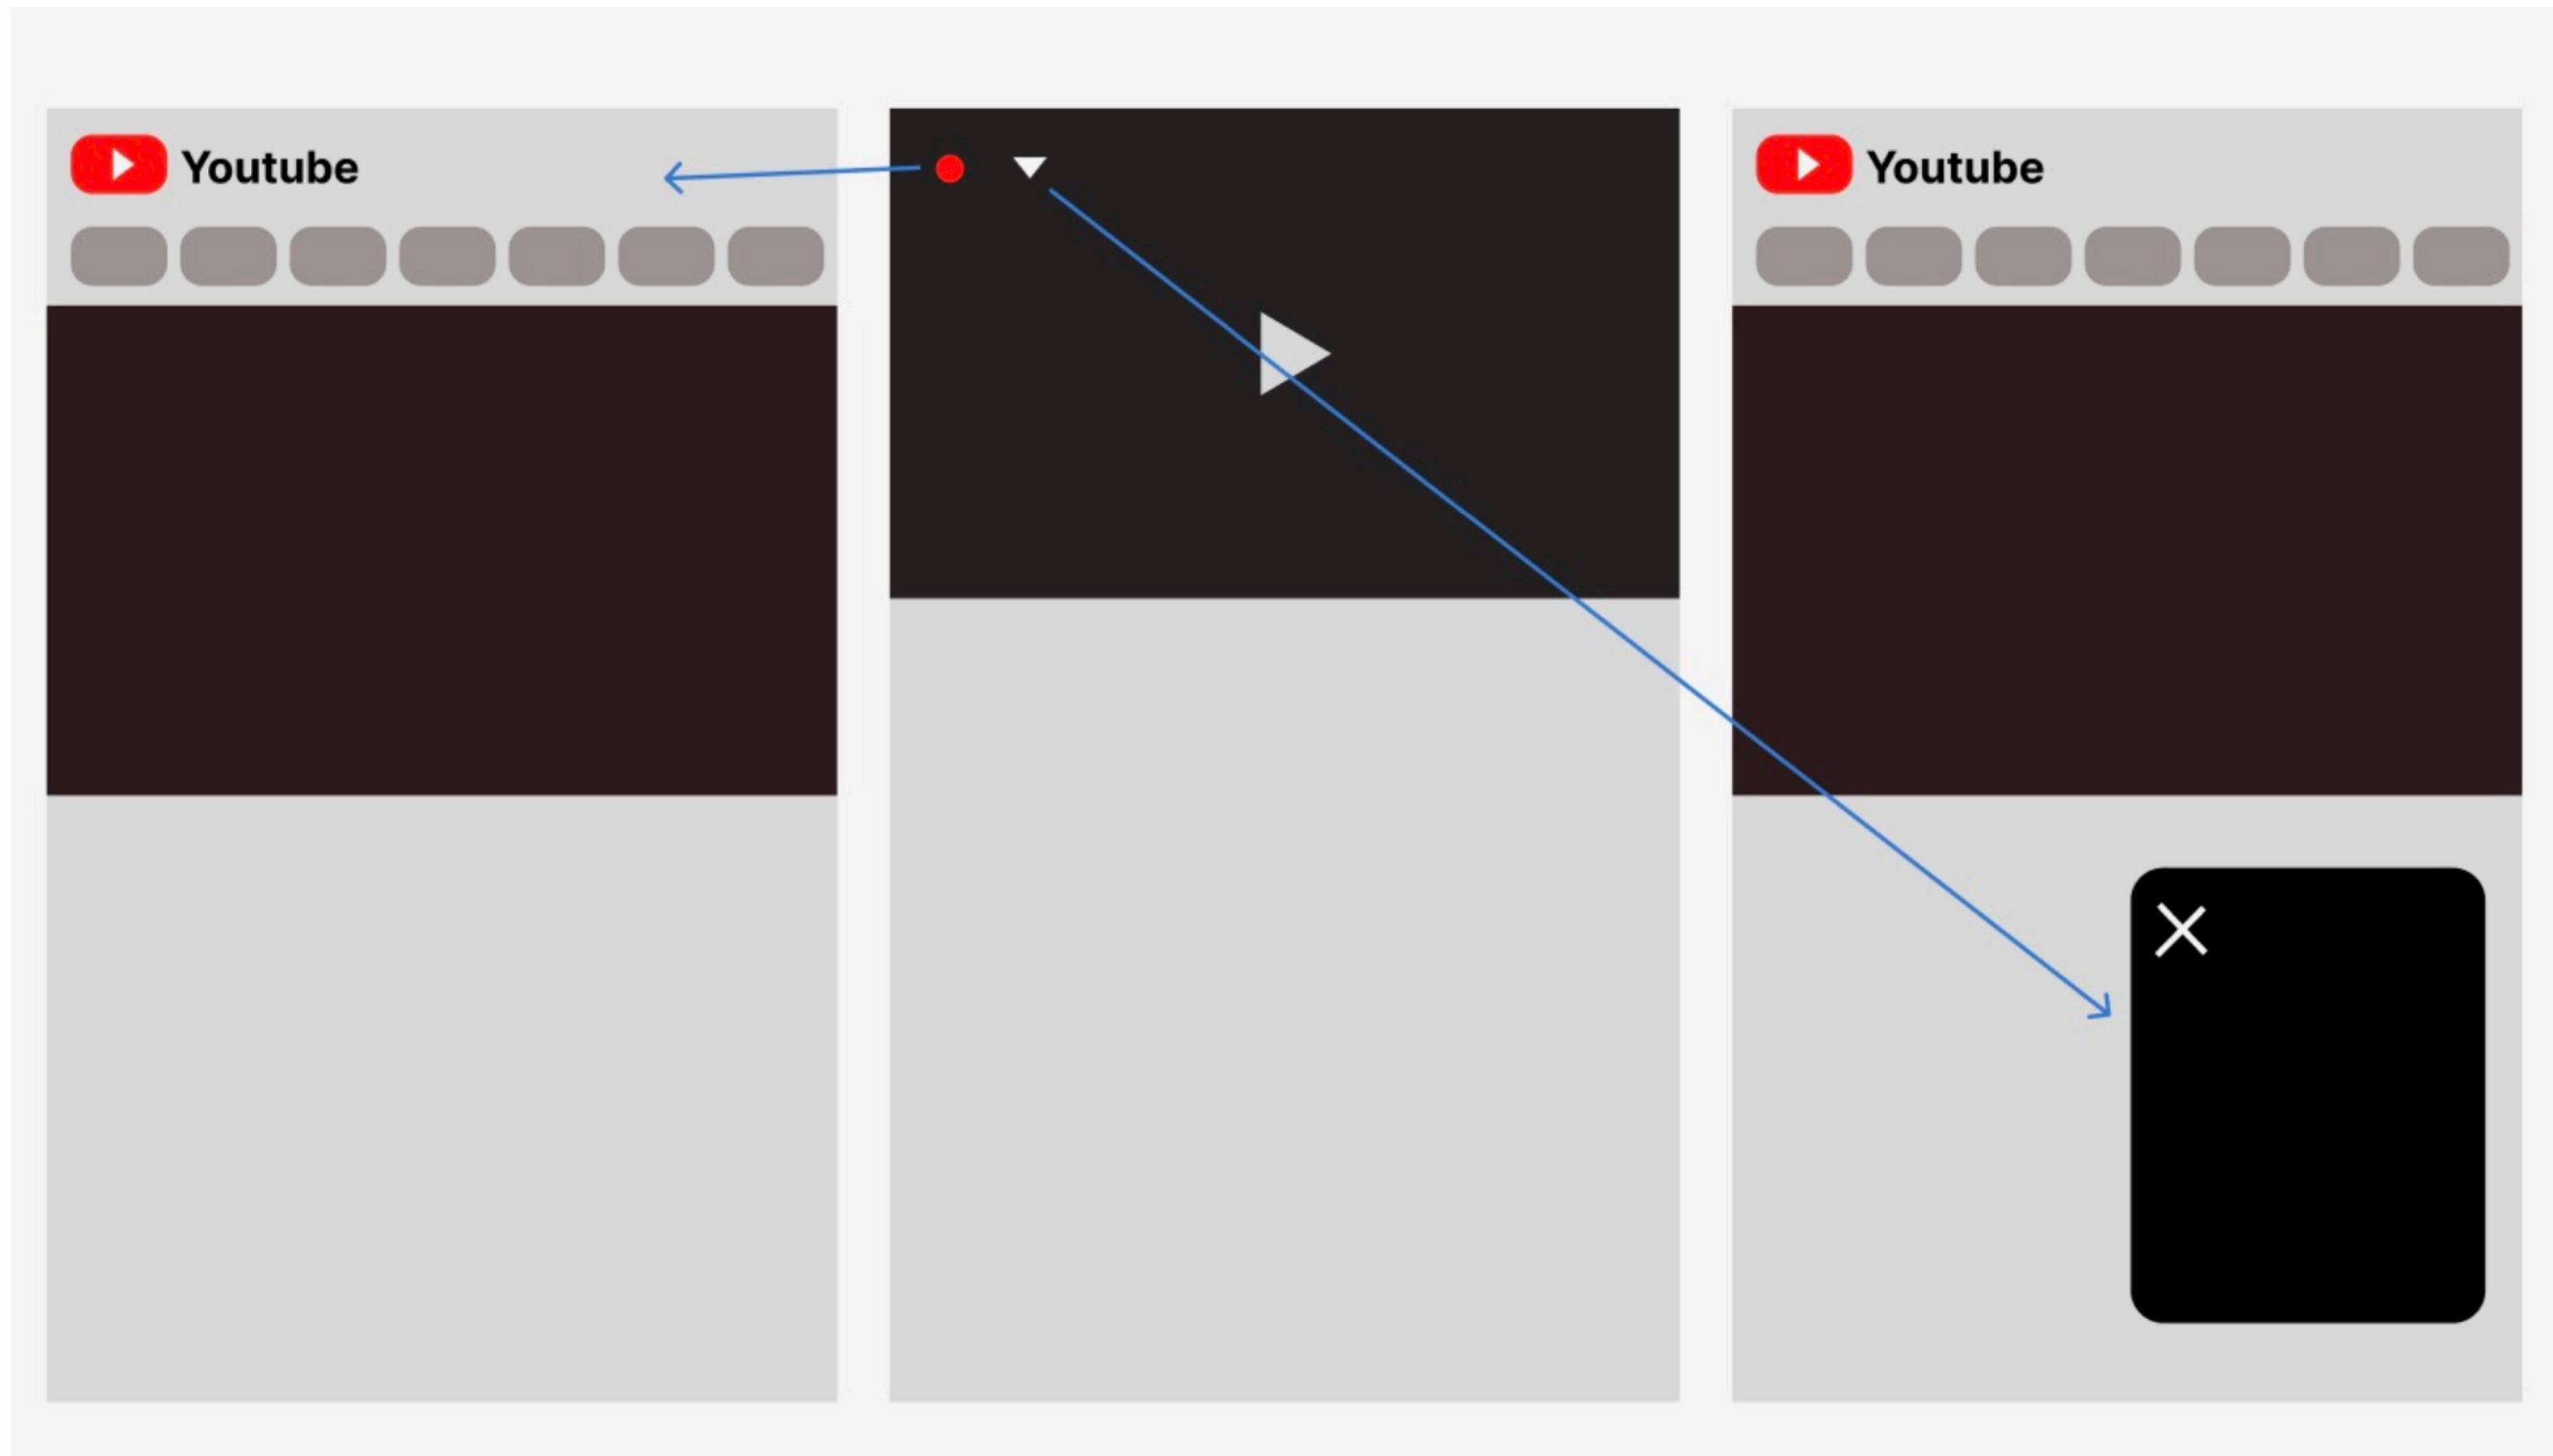

There should be
another button to
differentiate the “Exit”
and “Small Window”

My Modification

Add a Red Button for Shut down
the Video and Return Back to
the Main Page

Two Buttons Responsible for Different Functions
